OBJECTIVE

Machine Learning and Deep Learning enthusiast with experience in building scalable ML pipelines, predictive analytics solutions, and data-driven applications using live operational data. Skilled in statistical analysis, feature engineering, forecasting, and end-to-end data engineering. Building foundational knowledge in Computer Vision, including OpenCV and YOLO, while exploring RAG and LLM applications. Proficient in Python, SQL, and modern analytics tools..

EDUCATION

Master of Science in Data Science, Marwadi University (CGPA: 8.76) 2025 - Present

Bachelor of Science in Information Technology, Darshan University (CGPA: 9.31) 2022 - 2025

SKILLS

Programming & Libraries: Python, SQL, Pandas, NumPy, Scikit-learn, Matplotlib, Keras, TensorFlow

Machine Learning: Classification, Regression, Clustering, Predictive Modeling, Feature Engineering

Computer Vision: OpenCV, YOLO, Image Processing, Object Detection

Web Technologies: React.js, Node.js

Databases: MySQL, SQL Server, MongoDB

Tools & Visualization: Git, Power BI, Tableau

EXPERIENCE

Data Science Intern, Bloomfield Innovations April 2026 - June 2026

- Built scalable machine learning and analytics solutions for forecasting, risk assessment, and user segmentation using live operational data.
- Architected AI-powered Library Analytics and Financial Forecasting dashboards with advanced feature engineering, model validation, and predictive modeling techniques.

React.js Developer Intern, Starline Infotech Nov 2024 - Mar 2025

- Developed scalable web applications and role-based management systems with responsive user interfaces.
- Optimized workflows and built interactive data visualization components, enhancing operational efficiency and user experience across enterprise solutions.

PROJECTS

Road Traffic Accident Severity Prediction. Built a multi-class classification pipeline on 100K+ records using XGBoost and SMOTE for class imbalance. Engineered features from vehicle, weather, and temporal data, with research manuscript accepted for conference publication.

Electricity Load Forecasting System. Architected an LSTM-based forecasting model with temporal feature extraction, lag features, and seasonality decomposition to predict energy consumption across multiple time horizons.

Crop Prediction Developed a machine learning model to predict crop suitability and yield using environmental data, applying data preprocessing, feature engineering, and cross-validation to improve prediction accuracy and support data-driven agricultural decision-making.

Data Science Club Platform. Engineered a scalable full-stack platform with RBAC using MongoDB, Express.js, React, and Node.js. Designed RESTful APIs with JWT authorization and optimized server-side media storage.

CERTIFICATIONS & ACHIEVEMENTS

- Deloitte Data Analytics Job Simulation – Forage (April 2026)
- Tech Lead, Data Science Club – Pseudo Committee, Marwadi University
- NCC 'C' Certificate – A Grade , National Cadet Corps
- NCC 'B' Certificate – A Grade , National Cadet Corps
